

10th December 2010

Preview Press Release Intersec 2011 Trade Fair and Conference

Stand 2-813C

Visitors to Intersec 2011 will be among the first to see version 5.4 of MAXXESS's highly successful eFusion software platform which now includes the option of an Arabic language on-screen display, as well as a Hijri calendar.

"ViewPoint™, which understandably is one of the eFusion modules that attracts the most attention, now has the most extensive library of video integration protocols available," said Lee Copland, Managing Director of MAXXESS Systems EMEA. "Axis, Bosch, Ciefte/March, Cisco, Dedicated Micros, Geutebruck, Pelco, Samsung Techwin, Sony and Vicon are just some of the 42 manufacturers who have integrated with ViewPoint."

ViewPoint™ allows users to display video from multiple sources on one master display regardless of who the CCTV or IP based equipment manufacturer is and is just one of a large suite of eFusion modules which individually address specific security issues, but when working together provide a sophisticated global integrated security management software solution.

"We officially launched eFusion in 2009," added Lee Copland. "Since then, our software engineers have upgraded several of the modules so that we can now offer our growing network of customers throughout the Middle East with what is truly a very powerful and yet easy to implement set of integration tools."

eFusion v5.4 also includes improved and upgraded software to facilitate easy integration of a wide range of intruder and fire alarm systems.

MAXXESS can be found on stand 2-813C in the Commercial Security & Information Security zone of Intersec 2011 which takes place 16-18th January, 2011 at the Dubai International Convention and Exhibition Centre.

End

Editors' Notes: MAXXESS Systems is in the business of security management. The company has been a leader in traditional access control for decades and has enjoyed particular success over the last five years with its integrated hardware and software solutions which provide business and government with

the very highest-level of security management. MAXxess Systems are installed worldwide and range from small two-door systems to large campuses with multi-buildings or multi-sites managing hundreds of doors and thousands of badges.

MAXXESS software solutions enable a multitude of different types of systems to be seamlessly integrated together to ensure clients get the maximum out of their security systems, improve operational efficiency, reduce costs, maximise the life of existing systems and facilitate seamless migration to new technologies. Key to the success of what MAXXESS offer through the eAXxess, eFusion and EndPoint *adaptive* software suites is that clients do not have to strip out existing infrastructure when implementing new technology. This does not in any way, however, limit the ability to do so in the future, when new threats or requirements evolve.

MAXXESS Systems is a privately held company with its main headquarters in Anaheim, California. MAXxess Systems Europe, Ltd operates in the U.K. and services Europe, Middle East and Africa.
