

Access Control Module

Both **eAXxess** and **eFusion** can take full advantage of the powerful Access Control functionality developed by MAXXESS over more than twenty years. This capability is included in eAXxess and available as an optional module in eFusion. In both cases, Access Control is tightly integrated with available badging and video support capabilities.

The open architecture of the Access Control module enables flexible security management implementations with multitasking support. The use of WebPoint [standard with eAXxess, optional with eFusion] enables users to manage cardholders and analyze reports through a thin client virtually anywhere in the world.

The Access Control module provides the power to customize your access control system to your specific needs without requiring advanced technical expertise. This makes it ideal for a wide variety of applications such as multi-tenant office buildings, universities, hospitals, manufacturing facilities and much more. It provides the same high degree of security and control from the most limited implementation to the largest, multi-site solution.

eAXxess is primarily intended for Access Control applications with bounded scaling [e.g. up to 128 doors] and with limited integration requirements. eFusion Access Control is intended for applications with high degrees of scaling and/or integration.

The scaling ranges for Access Control are shown below for both eAXxess and eFusion.

Features

- **Graphic Integration**
- **Precision Access**
- **Desktop Video**
- **Alarm E-mail**
- **128-Bit Encryption**
- **Time & Attendance**
- **Status Window**
- **Multiple Calendars**
- **Database Utilities**
- **Partitions**
- **Template Design**
- **High-security Passwords**

Optional

- SQL Auto Import/Export**
- SQL On-Site Reporting**
- Badging Module**
- Elevator Module**
