

MAXXESS

RemotePoint

Remote identification and verification of access control cardholders

A hand held device which allows you to immediately check authorization for a member of staff, a visitor or a contractor to be at a particular location at a specific time.

Identification data, photos and biometrics can all be utilised to confirm identification and card validity.

A mobile extension of your security system that integrates with your existing database.

Designed to work with Smart cards e.g. HID's iCLASS platform and MIFARE, the system utilizes the memory available on the card itself to store data and images.

Fully compatible with MAXXESS eFusion Security Management Solutions

RemotePoint™

Remote identification and verification of access control cardholders

Standard Features

- Direct Interface to eFusion SQL Database
- Password protection
- User definable PDA and desktop screens.
- Photos and images stored in an eFusion system can be compressed in RemotePoint software to enable greater use of the iClass card.
- 10 User definable PDA icons
- Automatic creation of ODBC connection to eFusion SQL Database.

Applications include:

- Mobile security guards can verify status of anyone on site from wherever they are.
- Building sites—contractors can be granted speedy access while ensuring unwanted visitors are identified.
- Safety Officers can check on workers qualifications by reading the card in the field.
- Manages and tracks multiple expiration dates such as company contract period, contractors insurance, drug testing, safety testing and more to automatically disable personnel from access to buildings and other sensitive areas.
- Can be used for any type of expiration management and applications not necessarily restricted to personnel compliance initiatives.
- Use for equipment tracking and plant service intervals.
