

Security Solutions that Deliver a Business Advantage

eFusion provides a powerful set of security system integration solutions that gives you total flexibility and control over your security infrastructure, while reducing your operating costs.

Taking integration to a higher level

eFusion applications can collect, transmit, store and process information from just about any object—from security sensors to other security systems to facility management applications.

eFusion modules individually address specific security issues while collectively providing a sophisticated global integrated security solution.

With EndPoint, eFusion integrates all systems and logically displays event data by system or facility or by geographic area. It provides you with a smart infrastructure that goes beyond traditional enterprise security providing situational awareness and emergency management. eFusion ensures that your organisation's policies and procedures are followed during any security event.

Operational continuity

eFusion extends the life of your existing security systems. It integrates the old to the new as well as providing a seamless integration with the next generation of systems and sensors.

Adaptive solutions

You do not need to adapt to eFusion; it adapts to you. It is easy to implement and you need to implement only what you need when you need it.

Investment protection

You no longer have to strip out existing infrastructure when implementing new technology. eFusion turns your current infrastructure into a smart and open infrastructure and extends the useful life of your existing investments.

Reduced costs

The eFusion single integrated display results in more efficient use of security and security-related personnel throughout the organisation.

You don't need to make investments in software, infrastructure or training that are not required to meet your immediate objectives – without, in any way, limiting your ability to do so in the future, when your needs change.

eFusion allows you to use existing networks and economically run IP networks wherever appropriate and can integrate a world of innovative wireless sensors.

The bigger picture

eFusion allows you to see the bigger picture, make more informed decisions, share information throughout the organisation and respond quicker to events, while cutting your security costs dramatically.

eFusion™

Modular Event Management Software

- For Windows® Server

Applications

- Enterprise Class Access Control
- Generic Integrator— for Custom Third Party Integration
- Badging
- Server Redundancy
- Identity Management Module (IMM)
- Data Integration Services (Active Directory, Cashless Vending, SQL Database, File)
- eMobile Smartphone Interface
- Viewpoint— Video Source Integrations
- Integrator for Intrusion Detection Panels— Ademco, Bosch, DMP, Scantronics, Honeywell, others
- Integration for Fire Panel Integration—Notifier, Gent, Siemens, others
- eBuilding
- eTour
- eReg License Plate Recognition
- RemotePoint
- Available Integration to EndPoint Framework
- SIA Protocol Integration
- Inovonics Wireless Sensor Integration
- Database Query Integration— Allows Event Integration to Third Party Databases
- Elevator Floor Control
- Automatic Import/Export of Data

Client Features

- Fully Featured Alarm Management Tool
- Graphical Floor Plan Support
- Voice Annunciation with Action Messages on Alarm
- Email on Alarm or Designated System Event
- Windows® User Authentication
- Fully-featured Reporter with over 100 Pre-Defined Reports
- Cardholder Management
- Status Window Displaying All Endpoint Conditions
- 128 Bit Data Encryption Module
- Strong Passwords
- Global Input/Output Control
- Report Wizard for Customized Reports
- Video Cardholder Verification

eFusion™ Modular Event Management Software

Specifications

BASIC SERVER REQUIREMENTS

- Supported Operating Systems are Windows Server 2008, Windows Server 2003, Windows 7, Vista or XP Pro
- 4 GB RAM minimum
- 300 GB minimum hard disk raid Array
- Ethernet card
- CD/DVD

DATABASE INTERFACE

- Microsoft SQL Server 2005 Database

Note: Computer requirements could change. Please contact factory for current requirements.

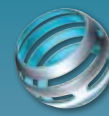

SYSTEM SPECIFICATIONS

COMMUNICATIONS

- TCP/IP 100Mb/s or 1Gb/s Ethernet

INSTALLATION

- LAN/WAN
