New Maxxess InSite™ Empowers Total Awareness

Innovative Awareness and Response Coordination System Uniquely Combines

Systems and Human Intelligence on a Unified, Easy-to-Use Platform

Yorba Linda, CA (November 29, 2018) – Maxxess Systems introduces new enterprise software that combines security, communications, business intelligence and data integration into a single, easy-to-use platform called Maxxess InSite™.

Nothing operates, functions or looks like Maxxess InSite. It combines systems intelligence and human intelligence to detect and respond to unfolding events in real-time – all of which is queued, organized and displayed on a highly-intuitive user interface. In doing so, Maxxess InSite truly enables early action, allowing IT, Operational Technology and Physical Security departments within organizations to

correlate data, improve response coordination, and deal with issues when they're small – before they become large and costly. This new system is uniquely categorized as an Awareness and Response Coordination System.

"Maxxess InSite sets a new benchmark for security and business intelligence software platforms by every standard of measure," said Nancy Islas, President of Maxxess Systems. "It goes beyond basic detection and control. It empowers total awareness and provides users with unprecedented capabilities to help prevent incidents from happening. It also coordinates the activities of first responders and the people they are assisting from the moment a threatening event is detected. And best of all, is the simplicity of Maxxess InSite's operation."

Maxxess InSite features an open-architecture framework to accommodate virtually any security or business intelligence application with comprehensive functionality – from automated responses with database integration to mobile alert notifications with two-way communications. Hardware and software solutions from more than 50 different leading manufacturers are already integrated into Maxxess InSite, providing more combined capabilities and functionality than any other cross-platform solution available. This allows Maxxess InSite to be configured for virtually all applications, employing any combination of software modules and hardware to deliver each user with a highly customized solution and unparalleled efficiency.

Maxxess Insite is a single system that harnesses the power of myriad system technologies, effectively expanding their collective capabilities while also making human interaction more intuitive. It meshes the capabilities of the following systems and technologies, and more: video surveillance, access control, GPS/IPS location technologies, intrusion detection, fire safety systems, perimeter detection/protection, HVAC/building management, smart phones and tablets, ID/credential badging, two-way communications, guard tour, visitor management, time and attendance, license plate recognition, hotkey emergency notification, reporting/forensics, wireless sensors, elevator/escalator control and database integration. Kevin Daly, CEO of Maxxess

Systems, added, "The beauty of the product is that even with these diverse integrations and functions, the system is very user friendly. Simplicity of use is truly the system's ultimate sophistication."
