Maxxess Solutions Proven the World Over

Innovative Solutions Deployed at Thousands of Locations for World's Leading Brands

Yorba Linda, CA (January 22, 2019) – [Maxxess Systems](#) continues to drive the virtualization of the physical security industry with the development and implementation of the industry's most advanced enterprise level situational awareness and response coordination solutions. Enhancing Maxxess Systems' momentum is the recent introduction of Maxxess InSite™ Awareness and Response Coordination System which meshes “system intelligence” and “human intelligence” to deliver an entirely new category of physical security and communications solution on a unified, easy to operate platform. Maxxess InSite joins the company's highly touted eFusion™ Security Management Software and Ambit™ Communications Software which are presently installed in thousands of facilities around the globe by many of the world's leading brands.

“Over the last decade our focus has been on developing highly intuitive, integrated solutions for high-profile clients,” said Nancy Islas, President of Maxxess Systems, Inc.

“This has allowed us to develop highly sophisticated software solutions based on the needs of high-profile users around the world. The resulting solutions we’ve developed aren’t just evolutionary in nature, they’re revolutionary with new benchmarks in situational awareness, communications and personnel coordination.”

High-profile users of Maxxess Systems’ solutions include: the Alshaya Group, an international franchise operator with over 90 globally recognized brands; CAE, the global leader in training for the aviation, defense, security and healthcare industries; Meraas, a leading developer of residential and commercial space in Dubai; Banco Central de Reserva del Peru, which mints and issues metal and paper money in Peru; Coppel, one of the largest retailers of clothing and household goods across Mexico; Regus, one of the world’s largest providers of flexible workspace; UDR, a real estate investment trust company in the US; the highly prestigious London School of Economics, and more than 50 companies in the renowned Emirates Group, among many others.

The Maxxess Systems portfolio is built on the following core software platforms:

Maxxess InSite Awareness and Response Coordination System combines “system intelligence” and “human intelligence” to detect and respond to unfolding events in real-time – all of which is queued, organized and displayed on a highly-intuitive user interface. In doing so, Maxxess InSite truly enables early action, allowing IT, Operational Technology and Physical Security departments within organizations to correlate data, improve response coordination, and deal with issues when they’re small – before they become large and costly. Maxxess InSite features an open-architecture framework to accommodate virtually any security or business intelligence application with comprehensive functionality. Over 50 different leading manufacturers are already integrated into Maxxess InSite, providing more combined capabilities and functionality than any other cross-platform solution available. This allows Maxxess InSite to be configured for virtually all applications, employing any combination of software modules and hardware to deliver each user with a highly-customized solution and unparalleled efficiency.

eFusion Security Management Software is a “system intelligence” solution that integrates and correlates data from surveillance, access control and various other physical security related inputs onto a comprehensive monitoring and reporting dashboard. eFusion provides video and access system management and control capabilities along with alarm monitoring, access credentials tracking/authorization/de-authorization remotely, door status and more. eFusion can be deployed as a stand-alone control platform, or as a core component of Maxxess InSite.

Ambit Communications Software is a “human intelligence” solution that provides security managers communication and location knowledge for remote personnel through their personal devices for alerts, notifications, status assessment and access management. Ambit can be deployed as a stand-alone communications platform, or as a core component of Maxxess InSite.

“The recent release of Maxxess InSite is the result of many years of software development and is based on the proven performance of our security and communications solutions,” continued Ms. Islas. “With the introduction of InSite, Maxxess Systems is bringing a completely new and unparalleled security and communications enterprise solution to the security marketplace.”
